

ECOMWATCH

REAL-TIME SERVICES FOR MONITORING AND CONTROLLING SENSITIVE SITES

EcomWatch is an advanced feature of EcomSaaS, Ecomesure's web-based services that take the guesswork out of controlling sensor and processing data.

Its dynamic data visualization system lets you monitor environmental parameters on your sites and provides visual alerts if concentrations exceed regulatory limits so that you can take immediate action.

With this hypervisor, you can :

- Import your own maps and locate your systems for measuring air quality, wind speed and direction and noise
- Configure visual cues based on measured pollutant values, limit exceedance times and/or connection downtime
- Pair air quality data with wind data to identify pollution sources and understand pollutant dispersion
- Enable automatic scrolling of measured parameters to stay up to date in real time

BENEFITS

- ⊕ Customized dashboards for quick and easy access to the most relevant information
- ⊕ Automatic updates of data collected in real time
- ⊕ Visual warning for better risk management
- ⊕ Full compatibility with all Ecomesure monitors and other integrated sensors
